Company | What we do

We enable good corporate governance and take the risk out of the send button.

Orchestria helps organizations eliminate the risks in uncontrolled electronic communication by helping to prevent confidential data leakage, protecting intellectual property, encouraging appropriate employee behavior, and ensuring regulatory compliance. Our approach results in substantial return on investment (ROI) while improving both corporate governance and employee behavior.

Orchestria controls threats across all electronic communication channels: e-mail, instant messaging, BlackBerry® type devices, Webmail and blogs. Additionally, Orchestria's technology is embedded in Bloomberg® Professional, Instant Bloomberg® and leading archive providers.

Our integration with leading archive vendors provides an unprecedented level of control for the full life of a message, from its creation through archive and retrieval.

Orchestria's family of control solutions is powered by highly accurate, intelligent policies that drive our core approach and take the risk out of business critical electronic communication. Our technology works in real time to accurately detect policy violations in all electronic communication before the message is sent or the Web transaction is completed.

prevent

Orchestria Real-Time Prevention™ interacts with the end-user in real-time, guiding, educating, and correcting potentially harmful messages before they are sent.

Customers | Customer Community

Our customers shape our knowledge and our goals. Together, we constitute a community committed to communication control.

More than 200 companies in 33 countries now rely on Orchestria to control their electronic communication. Our customers are some of the world's largest and most sophisticated organizations. They include insurance companies, defense contractors, investment banks, asset management firms, and hedge funds.

Our engagements with them span a broad range, with deployments that affect 500 users to more than 300,000 users and analyze in excess of 50 million individual messages daily.

With Bloomberg as a customer and a partner, Orchestria's solutions are available on every Bloomberg terminal. You may have already benefited from our technology.

Orchestria takes care to gain a deep understanding of our customers' businesses and goals. Clearly, their success is our success. Our annual customer summit meetings and quarterly customer councils allow us to explore electronic communication control together and the results inform our strategic goals.

Consequently, our customers are 100 percent referenceable and we encourage reference calls as part of the sales process.

Solutions | General Approach

Gain control in four clear steps with one proven approach.

The Only Effective Approach
 Orchestria's success in creating control-rich messaging environments for our customers comes from a deep understanding of the problem. Our unique approach consists of four proven steps to effective electronic communication control.

Define policies
 At the core of Orchestria's capabilities lie our hundreds of prefabricated and adaptive policies that define who can say what, and send what, to whom and for what purpose. They are categorized into five key areas that apply to specific industries and across industries, including:

- Intellectual Property
- Employee Behavior
- Regulatory Compliance
- Customer Management
- Financial & Legal Controls

Policy fine-tuning as well as the ability to create custom policies allows for good controls of all electronic messaging in even the most challenging customer environments.

Monitor channels
 Orchestria's broad coverage of all electronic messaging channels ensures that uncontrolled and potentially dangerous messages won't slip through. Orchestria monitors all channels including e-mail, instant messaging, blogging, Web-mail, and mobile mail (e.g., Blackberries, Treos, etc.). Even more importantly, our protection doesn't stop at the network perimeter; we cover both internal and external messages.

Accurately analyze messages
 Orchestria's policies offer a high level of accuracy and the confidence that goes with it. This is due to Orchestria's ability to analyze the entire message including the context of the message. Meta-data, the presence of information or lack of information, proximity of words or phrases to each other, attachments and more, all contribute to a positive and negative scoring process that helps accurately determine if a message is in violation or is in compliance. All this information is used to determine intent, which separates inadvertent messages from malicious ones.

Initiate appropriate controls
 Orchestria offers a feature rich solution that goes far beyond simply stopping messages that violate policy. Orchestria enables a full range of appropriate controls.

- Real-Time Prevention™ - Prevent harm by interacting with the user to correct messages before they are sent.
- Smart Tagging™ - Tag messages as they enter into your archive to provide message categorization, enable selective archiving and storage optimization.
- Legal Hold™ - Reduce the time, cost, and complexity of complying with eDiscovery and new amendments to the Federal Rules of Civil Procedure.
- Intelligent Review™ - Transform the review function from a process that wastes resources into an effective tool for analysis, surveillance, and tracking.
- Information Security™ - Secure your IP and confidential information from the single biggest security threat

Solutions | Orchestria Real-Time Prevention™

Orchestria gives you the power to stop harmful messages, now and in the future.

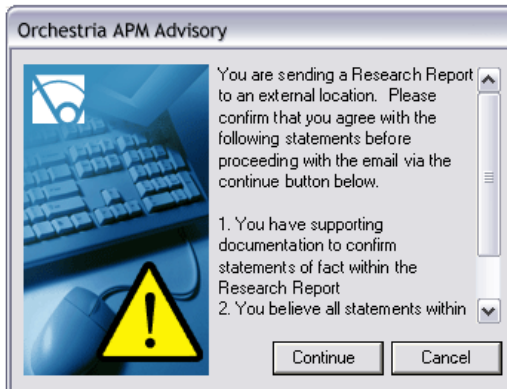

In an uncontrolled messaging environment, there are too many rules to remember and those rules are changing too fast. Employees, sending hundreds of messages per day, are under significant pressure and as a result may become lax and careless in their electronic communication.

As a result, any electronic message can potentially:

- Alter financial transactions
- Violate court orders
- Leak intellectual property or customer data
- Destroy corporate relationships
- Change contractual commitments
- Violate external regulations
- Harass fellow employees
- Create public relations nightmares

Orchestria's Real-Time Prevention is the only effective solution for managing threats in electronic communication before they occur and helps guide the user to greatly reduce the likelihood of future violations.

Real-Time Prevention accurately analyzes messages before they are sent. When violations are detected, it triggers appropriate action, as defined by your needs. Real-Time Prevention can block the message, either silently or with an alert that appears on the sender's screen. Orchestria can also provide end-users with detailed explanations of the problems, allowing them to instantly correct mistakes and re-send a fully compliant message. Instant feedback also helps train the end-user to not make the same error in the future, further reducing the amount of non-compliant messages going forward.

[Click here](#) to see all Features and Benefits.

Control Points

[Click Here](#) to see how Orchestria's Control Points provide complete deployment flexibility for Real-Time Prevention and all of our products. Orchestria flexible deployment controls messages on the desktop, the server, and at the gateway.
